OUR EXPERIENCES USING THE NEW NOTES

"ORANGE NOTES" a companion to the greens!!!
Sally Clifford DSM
Philip Dyer Consultant Diabetologist
Heart of England NHS TRUST

Why we agreed to be one of the pilot sites

- Chance to be part of the process of using the notes and testing how they worked in practice
- Able to give feedback to the Perinatal Institute on our experience
- Test the design before it went into its final version
- Chance to add or change anything we thought relevant

Cont'd

- Have input from the beginning
- Whole team committed from the beginning i.e.
 Diabetes and ante natal teams
- 3 sites in our trust, needed agreed uniformity across all sites

How we started

- Kate from the P.I. Visited with the whole team to discuss how we used the new notes
- 15 sets of notes to be used
- Present at the first meeting –
 Obstetricians, Diabetologists, DSN, DSM and Dietician
- All had a clear understanding of what was expected from us

Advantages of the new notes

- Emphasises to patient the importance of carrying their notes
- Standardises care and note keeping
- Simplifies notes and in a logical order
- No separate blood glucose home monitoring diary
- Engages women in information giving
- Awareness to other HCP re diabetes in pregnancy

Advantages cont'd

- Eliminates the risk of not knowing where to find information in hospital notes re diabetes care
- Local regional document
- Integrates diabetes care into rest of pregnancy care

Disadvantages of the new notes

- Home blood glucose diary very small lines inbetween each day for patients to record readings
- Only 31 weeks of readings can be included without adding continuation sheets, may need extra for some women
- Needed space to include a modified insulin sliding scale rather than just standard one
- New Nice guidelines recommend a post natal fasting glucose and not a OGTT

Disadvantages cont'd

- Post natal page needed some extra space to include any complications in pregnancy e.g.P.E.T
- Need to duplicate the patients medical history recorded in the new notes but then needed for the main hospital notes ?? Photocopy
- No associated computer database although most health records being computerised
